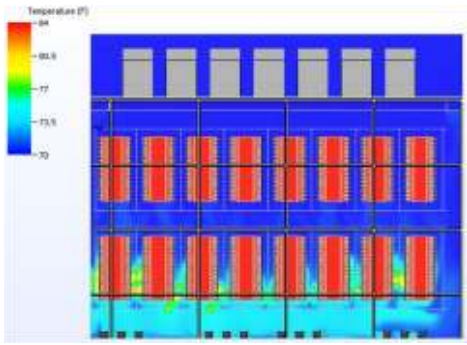
RECONFIGURABLE DATA CENTER LOUVER WALL CAGES

SWDP's Reconfigurable Data Center Louver Wall Cages

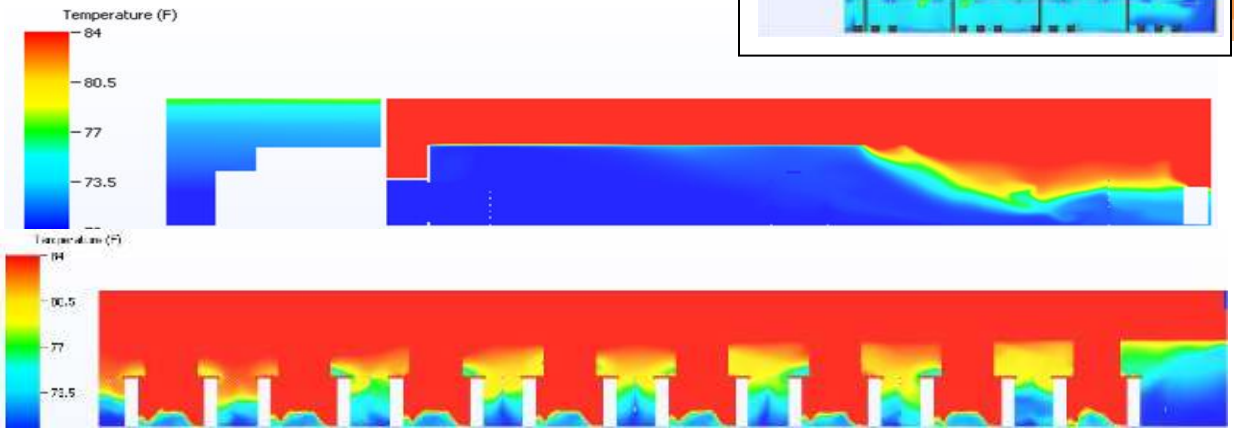


Higher densities requiring unimpeded airflows and sight security concerns have created the need for a cage system that allows airflow while providing security, both physical and sight. The traditional sight options impede that airflow

Our revolutionary Louver Wall Cage System provides the best of all worlds. While providing sight and physical security, it also provides certified airflow characteristics that can keep up with the cooling air demand in your Colocation facility

Built with interchangeability and ease of installation in mind, our Louver Wall Cage Panels interchange with our standard Reconfigurable Data Center Cage System.

Full CFD analysis is available and is certified to over 100CFM per Data Rack KW.



Reconfigurable Data Center Cages Features:

- Provides secure Multi-Tenant Data Center (MTDC), colocation site and equipment room security
- 100% scalable and interchangeability with our Reconfigurable Data Center Cage System
- Combinable in sections with standard cage or full cage build option
- Multiple standard height and widths
- Certified airflows
